

Home Page:

Feel at ease on your trip with our planner,
Create, organize, and plot your itinerary in a free holiday travel app.

About:

This web app can help travelers with checking the weather and search for hotels at their travel destination. The application also allows users to share their stories and read about traveling experiences of other travel buddies on a common social media wall.

TS(Tech Stack):

Front-end frameworks and tools: React + Vite, Bootstrap
- API testing tool: Hoppscotch

Using React + Vite for the front-end, Bootstrap for UI design, Hoppscotch for API testing, and Python + Flask for the back-end. React is a powerful and flexible library for building user interfaces, while Vite provides fast and efficient development tools. Bootstrap provides a set of pre-designed UI components that can be easily customized to match the project's requirements. Hoppscotch is a simple and easy-to-use API testing tool that allows developers to test and debug API endpoints quickly. Finally, Python + Flask provides a simple, flexible, and easy-to-use back-end framework that is well-suited for building scalable web applications.
